## As400 Card for UPS

The UPS Dry Contact Kit expansion card (AS400 Card) provides a dry contact interface for UPS peripheral monitoring. The dry contact signal is used to reflect the running status of the UPS, and it can also accept the shutdown command of the external dry contact. Users can monitor the UPS through an external line. It is a wide voltage input, with a switching-type high-efficiency regulated power supply, which adapts to the vast majority of UPS power supply voltages.

The AS/400 Cards are equipped with DB9 Connectors, plug and play! Reserved to upgrade and expand the interface, which can provide customers with special function customization and control logic. It has a compact structure design, which is directly compatible with the original SNMP smart slot to achieve function expansion.

Phoenix Dry Contact Kit supports various status monitoring of UPS. Including UPS failure, UPS alarm sound, remote shutdown, bypass (non-inverter) working mode, battery low potential, inverter working mode, abnormal mains power.

The AS400 card makes the extended card slot of the UPS power supply reasonably used, and makes the UPS power supply safer and more stable, and more functions that meet the needs of users. And while monitoring, various data can also be clearly displayed to the user, making the monitoring and management work easier for the user.
